

Aquatic Weed Treatments

Hillsborough County Mosquito and Aquatic Weed Control is tasked with controlling two types of non-native invasive species of aquatic weed on public waterways: Water Hyacinth and Water Lettuce.

Water Hyacinth (*eichornia crassipes*)

For treatments of foxtails, algae, and other types of native weeds, or treatment of private ponds, please contact a licensed commercial applicator.

Water Lettuce (*pistia stratiotes*)

This photo of Lake Hooker was taken just after treatment was begun to remove the Water Lettuce choking the surface. Some of it is already starting to turn brown.

A Treatment Success Story

After treatment, Lake Hooker is once again clear of weeds and ready to be enjoyed!
