

COMPOSTING

WHAT IS COMPOST?

It is a mixture of green materials and brown materials combined to decompose into rich dark soil

GREEN MATERIALS: grass clippings, kitchen scraps like raw vegetables, fruit, crushed egg shells, tea leaves

BROWN MATERIALS: fallen leaves from trees and shrubs, hay, sawdust, newspaper, cardboard

WHY COMPOST?

It enriches the soil naturally and reduces the need for chemical fertilizers

It can reduce the amount of garbage you set out for collection – waste reduction
