

GREEN THEME

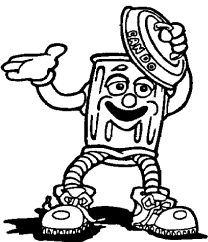

DID YOU KNOW?...

- It takes over 1.5 million barrels of oil to manufacture plastic bottles for a year's supply of water. That's enough oil to fuel 100,000 cars.

- Throwing away a single aluminum can, instead of recycling it, is like throwing away 6-ounces of gasoline
- Aluminum cans are recycled more than any other drink container

- **Employees in offices participating in the County's In-House Recycling Office Program may deposit empty aluminum cans and plastic bottles (#s 1 and 2 only) in the recycling containers with the can crusher on top**
